PROFESSIONAL SUMMARY

MERN Stack Developer

Experienced MERN Stack Developer with 3+ years of hands-on experience (December 2021 – Present) in designing, developing, and deploying scalable web applications. Proficient in MongoDB, Express.js, React.js, and Node.js, with strong expertise in building responsive, user-friendly interfaces and robust RESTful APIs. Adept at efficient database design, performance optimization, and secure backend development. Proven ability to work in agile environments, collaborate with cross-functional teams, and deliver high-quality, production-ready software solutions.

React Native Developer

Dedicated React Native Developer with 1 year of professional experience in building cross-platform mobile applications for iOS and Android. Skilled in leveraging JavaScript, React, and React Native to develop performant and scalable mobile solutions. Experienced in Redux Toolkit for state management, third-party library integration, API consumption, and application performance optimization. Strong focus on clean code, usability, and delivering high-quality mobile user experiences within fast-paced development teams.

STRENGTHS AND EXPERTISE

Frontend Technologies

- React.js
- Next.js
- React Native
- TypeScript
- HTML5 / CSS3
- Tailwind CSS
- Bootstrap
- Material UI
- Ant Design

Version Control & Collaboration

- GitHub

Payments Integration

- Stripe
- PayPal

Backend & APIs

- Node.js
- Express.js
- RESTful API Development
- Socket.IO (Real-time Communication)

Databases

- MongoDB
- PostgreSQL
- SQL
- MYSQL

State Management

- Redux Toolkit

Authentication & Backend Services

- Firebase (Authentication, Firestore, Hosting)

DevOps & Deployment

- CI/CD Pipelines (GitHub Actions, Jenkins)
- Hostinger VPS & Hosting Services
 - Server setup & configuration
 - Application deployment (React / Next.js / Node.js)
 - SSH server management (root access)
 - Environment configuration & maintenance
 - SSL setup & production monitoring

PROFESSIONAL EXPERIENCE

Nexus Corps(Client-Based)

Jan 2025 - Present

Full Stack Developer

- Developed, enhanced, and maintained scalable web applications using React.js, Next.js, Node.js, and Express.js, delivering high-performance, user-centric solutions.
- Built and maintained RESTful APIs and backend services with Node.js and MongoDB, ensuring secure and efficient data handling.
- Implemented state management using Redux Toolkit, improving application performance, reducing boilerplate code, and enhancing maintainability across large-scale projects.

- Integrated real-time features using Socket.IO, enabling live chat, notifications, and real-time updates in web applications.
- Managed application deployment and hosting on Hostinger VPS, including server configuration, environment setup, and maintenance using SSH (root access via command prompt).
- Configured and maintained production servers, handled domain setup, SSL certificates, process management, and application monitoring to ensure high availability.
- Utilized GitHub for version control, code reviews, and collaboration with cross-functional teams following best development practices.
- Implemented and maintained CI/CD pipelines using GitHub Actions and Jenkins to automate testing, builds, and deployments, ensuring faster releases and improved code quality.

PROJECTS

1) MLdatasci

- Automated Data & Payment Pipelines: Integrated secure Stripe payment processing and automated billing triggers, managing complex state changes and transaction logs across the database.
- Engineered Advanced Search & Filtering: Implemented efficient backend search algorithms and API endpoints to handle multi-tenant data retrieval, filtering, and seamless user-centric workflows
- Automated Data & Payment Pipelines: Integrated secure Stripe payment processing and automated billing triggers, managing complex state changes and transaction logs across the database.

2) FERTIMART

- Developed Multi-Portal Marketplace: Engineered end-to-end frontend and backend architecture for an agricultural SaaS/e-commerce platform, separating Admin management from Vendor and Customer portals
- Architected Product & Order Workflows: Designed core transactional pipelines covering product catalogs, digital quoting, vendor contracts, and automated invoicing with role-based security.
- Led the full product lifecycle from system architecture and database design to workflow automation, performance optimization, and deployment-ready backend services.

3) FERTIB2B

- Engineered Global B2B Trade & Procurement Architecture: Built a multi-portal SaaS system linking fertilizer producers, suppliers, and recyclers with core features for quotes, contracts, and logistics tracking.
- Automated Supply Chain & Financial Workflows: Designed and integrated complex invoicing and automated billing systems, ensuring secure B2B financial compliance and data integrity across multi-tenant networks.
- Implemented Expert Directory & Role-Based Access: Developed access control mechanisms enabling secure, role-based interaction between commercial trading partners, independent agronomists, and certified testing labs.

Fiverr & Upwork (Client-Based)

Jan 2023 - Present

Mern Stack & React Native

- Developed and maintained web and mobile applications for various clients using the MERN stack (MongoDB, Express.js, React.js, Node.js) and React Native.
- Implemented State Management: Utilized Redux Toolkit to manage complex state across React and React Native applications, reducing boilerplate and enhancing code maintainability.
- Real-time Features: Integrated Socket.IO for real-time communication features such as live chat and notifications in both web and mobile apps.
- Version Control and Collaboration: Used GitHub for version control, code reviews, and collaboration within cross-functional teams.
- CI/CD Pipelines: Set up CI/CD pipelines using Jenkins and GitHub Actions to automate testing and deployment processes for web and mobile applications, ensuring high code quality and rapid delivery.

PROJECTS

1) LEGALINTEL.NET

- Engineered Secure Legal Tech Architecture: Developed a multi-portal SaaS platform handling sensitive document flows across custom Admin, Legal Counsel, and Corporate Client environments.
- Automated Contract & Risk Workflows: Built backend pipelines and intelligent APIs to automate clause analysis, quote comparisons, and risk summaries, ensuring 100% data integrity for legal texts.

2) LIVESTLOADTRUCK

- Engineered Real-Time Freight & Logistics Architecture: Built a multi-portal SaaS platform connecting dispatchers, brokers, and truck drivers for live load matching and route optimization.
- Automated Dispatch & Financial Workflows: Developed backend pipelines to automate quotes, carrier contracts, and instant invoicing, ensuring seamless cross-state data integrity and transaction tracking.

3) WACKERTRUCKING

- Developed Fleet Asset & Broker Portals: Built an end-to-end multi-portal system tailored for regional carrier workflows, cleanly partitioning operations for Dispatchers, Active Drivers, and Commercial Clients.
- Streamlined Freight & Billing Operations: Engineered backend pipelines to automate freight quoting, hauling contracts, and invoicing, maintaining absolute data integrity across multi-state shipping records.

Mern Stack & React Native SAS Tech (Product-Based)

Jan 2023 - Dec 2023

- Built responsive and user-friendly interfaces for web and mobile applications for a product-based platform, **ApilonShift**, where users can upload images, audio, videos, articles, and chapters, and engage in chat functionality.
- Created and managed repositories on GitHub, implementing best practices for version control and collaborative development.
- Integrated Socket.IO for chat and real-time updates in both web and mobile applications, enhancing user interaction and engagement.
- Database Management: Utilized Firebase for authentication and real-time data, and managed relational data using SQL.
- Designed and implemented CI/CD workflows with Github, automating build, test, and deployment processes to improve development efficiency.
